BASIC-ABSTRACT:

NOVELTY - The present invention relates to a system for transferring satellite clock time by utilizing low-voltage distribution network carrier, which is characterized by that it adopts the principle of that power line carrier can implement signal transmission, modulates the digital time signal of satellite clock on the carrier signal, and couples it on the distribution network of low-voltage side of distribution transformer, and utilizes coupling and demodulation to make any user using electricity on said distribution network

can utilize special-made user clock to directly obtain accurate
satellite clock
time from power lin.
